Introduction

We have been instructed by Nottinghamshire County Council, the administering authority to the Nottinghamshire County Council Pension Fund (the Fund), to undertake pension expense calculations in respect of pension benefits provided by the Local Government Pension Scheme (the LGPS) to employees of Newark & Sherwood District Council (the Employer) as at 31 March 2020. We have taken account of current LGPS Regulations, as amended, as at the date of this report.

This report is addressed to the Employer and its advisers; in particular, this report is likely to be of relevance to the Employer's auditor.

These figures are prepared in accordance with our understanding of International Accounting Standard 19 (IAS19).

This advice complies with Technical Actuarial Standard 100: Principles for Technical Actuarial Work (TAS 100).

The figures quoted will form the basis of the balance sheet and funding status disclosures to be made by the Employer as at 31 March 2020 in respect of its pension obligations under the LGPS. The projected pension expense calculations for the year to 31 March 2021 may be used for the purpose of any interim financial reporting during the year to 31 March 2021. However, it may subsequently be necessary to adjust these projections following the occurrence of any material events such as curtailments, settlements or the discontinuance of the Employer's participation in the Fund.

Further information relating to our treatment of GMP is included on page 9 of this disclosure.

Please note that an allowance was made for the potential impact of the McCloud & Sargeant judgement in the results provided to the Employer at the last accounting date and therefore is already included in the starting position for this report. This allowance is therefore incorporated in the roll forward approach and is remeasured at the accounting date along with the normal LGPS liabilities.

Please note we have not made any allowance for IFRIC14 in our calculations. We would be happy to speak to the Employer or their auditor if more information is required.

IAS19 also requires the disclosure of any other employer provided pension benefits which are not paid from the Fund itself: examples include additional pensions paid on retirement under the Discretionary Payment Regulations. We have only valued such additional liabilities, which would not be covered in the formal LGPS valuation, to the extent that they have been notified to us and are as disclosed in the Valuation data section of this report.

Amendments to the IAS19 standard now requires that, when determining any past service cost or gain or loss on settlement, the net defined benefit liability is remeasured using current assumptions and the fair value of plan assets at the time of the event. The amendment does, however, note that the extra remeasurement does not need to be applied where the application of that remeasurement is immaterial. As requested by the Employer we have treated 3 events, which occurred over the accounting period, as material 'special events'.

Characteristics of defined benefit plans and associated risks

The LGPS is a defined benefit statutory scheme administered in accordance with the Local Government Pension Scheme Regulations 2013 and currently provides benefits based on career average revalued earnings. Full details of the benefits being valued are as set out in the Regulations as amended and summarised on the LGPS website and the Fund's membership booklet.

The administering authority for the Fund is Nottinghamshire County Council. The Pension Fund Committee oversees the management of the Fund whilst the day to day fund administration is undertaken by a team within the administering authority. Where appropriate some functions are delegated to the Fund's professional advisers.

As administering authority to the Fund, Nottinghamshire County Council, after consultation with the Fund Actuary and other relevant parties, is responsible for the preparation and maintenance of the Funding Strategy Statement and the Investment Strategy Statement. These should be amended when appropriate based on the Fund's performance and funding.

Contributions are set every three years as a result of the actuarial valuation of the Fund required by the Regulations. The next actuarial valuation of the Fund will be carried out as at 31 March 2022 and will set contributions for the period from 1 April 2023 to 31 March 2026. There are no minimum funding requirements in the LGPS but the contributions are generally set to target a funding level of 100% using the actuarial valuation assumptions.

On the Employer's withdrawal from the Fund, a cessation valuation will be carried out in accordance with Regulation 64 of the LGPS Regulations 2013 which will determine the termination contribution due by the Employer, on a set of assumptions deemed appropriate by the Fund Actuary.

In general, participating in a defined benefit pension scheme means that the Employer is exposed to a number of risks:

- Investment risk. The Fund holds investment in asset classes, such as equities, which have volatile market values and while these assets are expected to provide real returns over the long-term, the short-term volatility can cause additional funding to be required if a deficit emerges;
- Interest rate risk. The Fund's liabilities are assessed using market yields on high quality corporate bonds to discount future liability cashflows. As the Fund holds assets such as equities the value of the assets and liabilities may not move in the same way;
- Inflation risk. All of the benefits under the Fund are linked to inflation and so deficits may emerge to the extent that the assets are not linked to inflation; and
- Longevity risk. In the event that the members live longer than assumed a deficit will emerge in the Fund. There are also other demographic risks.

In addition, as many unrelated employers participate in the Nottinghamshire County Council Pension Fund, there is an orphan liability risk where employers leave the Fund but with insufficient assets to cover their pension obligations so that the difference may fall on the remaining employers.

All of the risks above may also benefit the Employer e.g. higher than expected investment returns or employers leaving the Fund with excess assets which eventually get inherited by the remaining employers.

Valuation data

Data sources

In completing our calculations for pension accounting purposes we have used the following items of data, which we received from Nottinghamshire County Council:

- The results of the valuation as at 31 March 2019 which was carried out for funding purposes and the results of the 31 March 2019 IAS19 report which was prepared for accounting purposes;
- Estimated whole Fund income and expenditure items for the period to 31 March 2020;
- Estimated Fund returns based on Fund asset statements provided (or estimated where necessary) as at 31 March 2019 and 31 December 2019, Fund income and expenditure as noted above, and estimated market returns thereafter for the period to 31 March 2020;
- Estimated Fund income and expenditure in respect of the Employer for the period to 31 March 2020;
- Details of any new early retirements for the period to 31 March 2020 that have been paid out on an unreduced basis, which are not anticipated in the normal employer service cost; and
- Details of any settlements for the period to 31 March 2020.

Although some of these data items have been estimated, we do not believe that they are likely to have a material effect on the results of this report. Further, we are not aware of any material changes or events since we received the data. The data has been checked for reasonableness and we are happy that the data is sufficient for the purposes of this advice.

Employer membership statistics

The table below summarises the membership data, as at 31 March 2019 for members receiving funded benefits.

Member data summary	Number	Salaries/Pensions	Average age
		£000s	
Actives	522	12,671	45
Deferred pensioners	773	1,662	47
Pensioners	700	3,930	71
Unfunded pensioners	100	197	80

The service cost for the year ending 31 March 2020 is calculated using an estimate of the total pensionable payroll during the year. The estimated total pensionable payroll during the year is £9,946,000, as advised by the Employer. The projected service cost for the year ending 31 March 2021 has been calculated using an estimated payroll of £12,773,000, as advised by the Employer.

Scheduled contributions

The table below summarises the minimum employer contributions due from Newark & Sherwood District Council to the Fund over this inter-valuation period. The calculated cost of accrual of future benefits is 17.5% of payroll p.a.

Minimum employer contributions due for the period beginning	1 Apr 2020	1 Apr 2021	1 Apr 2022
Percent of payroll	17.5%	17.5%	17.5%
plus monetary amount (£000s)	771	800	829

However, Newark & Sherwood District Council have agreed with the administering authority that they will prepay their monetary contributions for the three years to 31 March 2023 by making a single lump sum payment of £2,235,000 by 30 April 2020. This lump sum payment has received an actuarially equivalent discount to the monetary rates above and Newark & Sherwood District Council have been notified separately of this amount. If they don't make this lump sum payments by 30 April 2020, the contribution rates set out above will apply as normal.

Newark & Sherwood District Council may pay further amounts at any time and future periodic contributions, or the timing of contributions may be adjusted on a basis approved by us.

Early retirements

We requested data on any early retirements in respect of the Employer from the administering authority for the year ending 31 March 2020.

We have been notified of three new early retirements during the year which were not allowed for at the previous accounting date. The total annual pension that came into payment was £35,800.

Assets

The return on the Fund (on a bid value to bid value basis) for the year to 31 March 2020 is estimated to be -8%. The actual return on Fund assets over the year may be different.

The estimated asset allocation for Newark & Sherwood District Council as at 31 March 2020 is as follows:

Asset breakdown	31 Mar 2020		31 Mar 2019	
	£000s	%	£000s	%
Equities	63,184	64%	52,358	62%
Gilts	3,249	3%	2,747	3%
Other bonds	8,571	9%	7,817	9%
Property	12,545	13%	11,415	14%
Cash	2,416	2%	2,038	2%
Inflation-linked pooled fund	3,597	4%	3,066	4%
Infrastructure	5,242	5%	4,061	5%
Unit trust	0	n/a	856	1%
Total	98,804	100%	84,358	100%

We have estimated the bid values where necessary. Please note that the individual percentages shown are to the nearest percentage point for each asset class and may not sum to 100%. The final asset allocation of the Fund assets as at 31 March 2020 is likely to be different from that shown due to estimation techniques.

Based on the above, the Employer's share of the assets of the Fund is approximately 2%.

We received the following information from the administering authority regarding the detail of their assets as at 31 December 2019, representing the percentages of the total Fund held in each asset class (split by those that have a quoted market price in an active market, and those that do not).

Asset breakdown		31 Dec 2019	
		% Quoted	% Unquoted
Fixed Interest Government Securities			
	UK	3.3%	-
Corporate Bonds			
	UK	8.5%	-
	Overseas	0.2%	-
Equities			
	UK	25.8%	0.1%
	Overseas	34.6%	-
Property			
	All	-	12.7%
Others			
	Private Equity	-	2.5%
	Infrastructure	-	5.3%
	Unit trust	-	1.0%
	Inflation-linked pooled fund	-	3.6%
	Cash/Temporary Investments	-	2.4%
Total		72.4%	27.6%

We do not have any further detail on the current asset allocation of the Fund; we suggest that if further information is required the administering authority is contacted in the first instance. Please note that as above, no adjustments for presentational purposes have been made to the percentages shown.

Actuarial methods and assumptions

Valuation approach

Valuation of the Employer's liabilities

To assess the value of the Employer's liabilities at 31 March 2020, we have rolled forward the value of the Employer's liabilities calculated for the funding valuation as at 31 March 2019, using financial assumptions that comply with IAS19.

The full actuarial valuation involved projecting future cashflows to be paid from the Fund and placing a value on them. These cashflows include pensions currently being paid to members of the Fund as well as pensions (and lump sums) that may be payable in future to members of the Fund or their dependants. These pensions are linked to inflation and will normally be payable on retirement for the life of the member or a dependant following a member's death.

It is not possible to assess the accuracy of the estimated value of liabilities as at 31 March 2020 without completing a full valuation. However, we are satisfied that the approach of rolling forward the previous valuation data to 31 March 2020 should not introduce any material distortions in the results provided that the actual experience of the Employer and the Fund has been broadly in line with the underlying assumptions, and that the structure of the liabilities is substantially the same as at the latest formal valuation. From the information we have received there appears to be no evidence that this approach is inappropriate.

Valuation of the Employer's assets

To calculate the asset share we have rolled forward the assets allocated to the Employer at 31 March 2019 allowing for investment returns (estimated where necessary), contributions paid into, and estimated benefits paid from, the Fund by and in respect of the Employer and its employees.

The Employer currently participates in the Newark & Sherwood District Council pool with other employers in order to share experience of risks they are exposed to in the Fund. At the 2019 valuation, the deficit for the whole pool was calculated and allocated to each employer in proportion to their value of liabilities. The next reallocation will be carried out at the 2022 valuation, should the Employer remain in the pool. Each employer within the pool pays a contribution rate based on the cost of benefits of the combined membership of the pool.

Experience items allowed for since the previous accounting date

As a result of allowing for actual experience, which may be different from that assumed previously, an experience item may be observed in the reconciliation of liabilities to 31 March 2020. The effect of allowing for the actual experience is shown in Appendix 3.

Guaranteed Minimum Pension (GMP) Equalisation

As a result of the High Court's recent Lloyds ruling on the equalisation of GMPs between genders, a number of pension schemes have made adjustments to accounting disclosures to reflect the effect this ruling has on the value of pension liabilities. It is our understanding that HM Treasury have confirmed that the judgement "does not impact on the current method used to achieve equalisation and indexation in public service pension schemes". More information on the current method of equalisation of public service pension schemes can be found [here](#).

On 22 January 2018, the Government published the outcome to its *Indexation and equalisation of GMP in public service pension schemes* consultation, concluding that the requirement for public service pension schemes to fully price protect the GMP element of individuals' public service pension would be extended to those individuals reaching State Pension Age (SPA) before 6 April 2021. HM Treasury published a Ministerial Direction on 4 December 2018 to implement this outcome, with effect from 6 April 2016. Details of this outcome and the Ministerial Direction can be found [here](#).

Our valuation assumption for GMP is that the Fund will pay limited increases for members that have reached SPA by 6 April 2016, with the Government providing the remainder of the inflationary increase. For members that reach SPA after this date, we have assumed that the Fund will be required to pay the entire inflationary increase. Therefore we do not believe we need to make any adjustments to the value placed on the liabilities as a result of the above outcome.

Demographic/Statistical assumptions

We have adopted a set of demographic assumptions that are consistent with those used for the most recent Fund valuation, which was carried out as at 31 March 2019. The post retirement mortality tables adopted are the S3PA tables with a multiplier of 110% for males and 105% for females. These base tables are then projected using the CMI_2018 Model, allowing for a long-term rate of improvement of 1.25% p.a., smoothing parameter of 7.5 and an initial addition to improvements of 0.5% p.a.

This has been updated since the last accounting date where the demographic assumptions were based on those adopted for the Fund's 31 March 2016 valuation, other than updating mortality improvement projections in line with CMI_2018 at the previous accounting date. The impact of updating the demographic assumptions is set out in the Change in demographic assumptions figure in Table 1 of Appendix 3.

The assumed life expectations from age 65 are:

Life expectancy from age 65 (years)	31 Mar 2020	31 Mar 2019
Retiring today		
Males	21.8	21.6
Females	24.4	24.4
Retiring in 20 years		
Males	23.2	23.3
Females	25.8	26.2

We have also assumed that:

- Members will exchange half of their commutable pension for cash at retirement;
- Members will retire at one retirement age for all tranches of benefit, which will be the pension weighted average tranche retirement age; and
- The proportion of the membership that had taken up the 50:50 option at the previous valuation date will remain the same.

Financial assumptions

The financial assumptions used to calculate the results are as follows:

Assumptions as at	31 Mar 2020	31 Mar 2019	31 Mar 2018
	% p.a.	% p.a.	% p.a.
Discount rate	2.35%	2.40%	2.55%
Pension increases	1.90%	2.40%	2.30%
Salary increases	2.90%	3.90%	3.80%

These assumptions are set with reference to market conditions at 31 March 2020.

Our estimate of the Employer's past service liability duration is 20 years. This has been calculated based on membership data provided for the most recent full valuation of the Employer's liabilities at 31 March 2019. This may differ from the estimated duration at the previous accounting date.

An estimate of the Employer's future cashflows is made using notional cashflows based on the estimated duration above. These estimated cashflows are then used to derive a Single Equivalent Discount Rate (SEDR). The discount rate derived is such that the net present value of the notional cashflows, discounted at this single rate, equates to the net present value of the cashflows, discounted using the annualised Merrill Lynch AA rated corporate bond yield curve (where the spot curve is assumed to be flat beyond the 30 year point). This is consistent with the approach used at the previous accounting date.

Similar to the approach used to derive the discount rate, the Retail Prices Index (RPI) increase assumption is set using a Single Equivalent Inflation Rate (SEIR) approach, using the notional cashflows described above. The single inflation rate derived is that which gives the same net present value of the cashflows, discounted using the annualised Merrill Lynch AA rated corporate bond yield curve, as applying the BoE implied inflation curve. As above, the Merrill Lynch AA rated corporate bond yield spot curve is assumed to be flat beyond the 30 year point and the BoE implied inflation spot curve is assumed to be flat beyond the 40 year point. This is consistent with the approach used at the previous accounting date.

As future pension increases are expected to be based on the Consumer Prices Index (CPI) rather than RPI, we have made a further assumption about CPI which is that it will be 0.8% p.a. below RPI i.e. 1.9% p.a. We believe that this is a reasonable estimate for the future differences in the indices, based on the different calculation methods, recent independent forecasts and the duration of the Employer's liabilities. The difference between RPI and CPI is less than assumed at the previous accounting date. This reflects the movement in market implied RPI inflation that occurred following the UK Statistics Authority's proposal to change how RPI is calculated and subsequent announcements from the Chancellor on the issue.

Salaries are assumed to increase at 1.0% p.a. above CPI. This differs from the salary increase assumption at the previous accounting date and has been updated in line with the most recent funding valuation.

Special events dates

As mentioned above, we have allowed for a number of 'special events' over the accounting period. The net defined benefit liability has been remeasured at each of these event dates using market statistics and the fair value of plan assets at the time of the event.

The below table sets out the dates of these 'special events' and the financial assumptions adopted for each period of remeasurement. The assumptions have been derived consistently with the previous accounting date. However, for dates after 3 September 2019 we have adopted a slightly lower RPI/CPI gap of 0.8%, consistent with the approach set out above.

Event date	Discount rate	Pension increases	Real discount rate
31/03/2019	2.40%	2.40%	0.00%
29/04/2019	2.45%	2.45%	0.00%
30/11/2019	2.00%	2.30%	-0.30%
31/01/2020	1.75%	2.25%	-0.50%
31/03/2020	2.35%	1.90%	0.45%

Past service costs/gains

Past service costs/gains arise as a result of introduction or withdrawal of, or changes to, member benefits. For example, an award of additional discretionary benefits to a member such as added years by a member would be considered a past service cost.

We are not aware of any additional benefits which were granted over the year ending 31 March 2020.

Curtailments

We have calculated the cost of curtailments arising as a result of the payment of unreduced pensions on early retirement. The Employer may also have to account for non-pension related costs (e.g. lump sum payments on redundancy) but for the avoidance of doubt, we have only calculated the cost of curtailments which affect the Employer's LGPS pension liabilities.

We calculate the cost of curtailments at the point of exit, with interest applied to the accounting date accounted for separately.

Over the year, we understand that three former employees became entitled to unreduced early retirement benefits. The capitalised cost of the additional benefits on IAS19 compliant assumptions is calculated at £167,000. This figure has been included within the service cost in the statement of profit and loss.

Unless confirmed to us by the Employer as not material, the cost of each curtailment is calculated using assumptions derived based on market conditions at the date of exit. If not material, then the cost is calculated based on the assumptions applicable at the previous material 'special event' date (or at the previous accounting date if there are no previous material 'special events'). The below table shows the capitalised cost of each of the curtailment events allowed for and the financial assumptions used to calculate this cost. We have also indicated whether the event has been allowed for as a 'special event'. Details of the financial assumptions adopted at each 'special event' date are set out above in the Financial assumptions section.

NI number	Date of curtailment	Curtailment cost £000s	Discount rate	Pension increases	Treated as special Event?
YY586415A	31 October 2019	3	2.45%	2.45%	No
WL821002D	30 November 2019	69	2.00%	2.30%	Yes
WL643208B	29 April 2019	95	2.45%	2.45%	Yes

Settlements

As a result of some members transferring into / out of the Employer over the year liabilities have been settled at a cost different to the accounting reserve. The capitalised loss of this settlement is £13,390,000.

A summary of the transfers into/out of the Employer over the year is set out below. This includes the value of assets transferred to/from the Employer in respect of any transfers and the value of the transferred defined benefit obligation. Where applicable, we have also provided the date of the report provided to the administering authority in relation to the transfer which includes a summary of the membership data used to calculate the value of assets and liabilities transferred.

Unless confirmed to us by the Employer as not material, the value of the transferred defined benefit obligation for each settlement is calculated using assumptions derived based on market conditions the date of transfer. If not material, then the cost is calculated based on the assumptions applicable at the previous material 'special event' date (or at the previous accounting date if there are no previous material 'special events'). We have also included the key financial assumptions used to calculate the value of transferring liabilities and indicated whether the event has been allowed for as a material event. Details of the financial assumptions at 'special event' date is set out above in the Financial assumptions section.

Settlements in	Transfer date	Assets transferred	Liabilities transferred	Report date	Discount rate	Pension increases	Treated as special
Employer transferred from		£000s	£000s	(if applicable)			Event?
Newark & Sherwood Homes	31 January 2020	25,459	38,849	n/a	1.75%	2.25%	Yes
Total		25,459	38,849				

Results and disclosures

We estimate that the value of the net liability as at 31 March 2020 is a liability of £72,397,000.

The results of our calculations for the year ended 31 March 2020 are set out in the appendices below:

- Appendix 1 sets out the Statement of financial position as at 31 March 2020;
- Appendix 2 sets out the Statement of profit and loss for the year ended 31 March 2020;
- Appendix 3 details a reconciliation of assets and liabilities during the year;
- Appendix 4 shows a sensitivity analysis on the major assumptions;
- Appendix 5 shows the Remeasurements in other comprehensive income for the year;
- Appendix 6 contains our estimates of the projected profit and loss account costs for the year ending 31 March 2021. Please note that no allowance has been made for the costs of any early retirements or augmentations which may occur over the year and whose additional capitalised costs would be included in the value of liabilities. It is only an estimate so actual experience over the year is likely to differ. We have not provided balance sheet projections on the basis that they will depend upon market conditions and the asset value of the Fund at the end of the following year.

The figures presented in this report are prepared only for the purposes of IAS19. In particular, they are not relevant for calculations undertaken for funding purposes or for other statutory purposes under UK pensions legislation.

We would be pleased to answer any questions arising from this report.

Julie Baillie FFA
Actuary

Appendix 1 Statement of financial position as at 31 March 2020

Net pension asset as at	31 Mar 2020	31 Mar 2019	31 Mar 2018
	£000s	£000s	£000s
Present value of the defined benefit obligation	168,822	147,283	144,173
Fair value of Fund assets (bid value)	98,804	84,358	78,390
Deficit / (Surplus)	70,018	62,925	65,783
Present value of unfunded obligation	2,379	2,874	3,053
Unrecognised past service cost	-	-	-
Impact of asset ceiling	-	-	-
Net defined benefit liability / (asset)	72,397	65,799	68,836

Appendix 2 Statement of profit and loss for the year to 31 March 2020

The amounts recognised in the profit and loss statement are:	Year to	Year to
	31 Mar 2020	31 Mar 2019
	£000s	£000s
Service cost	17,471	4,347
Net interest on the defined liability (asset)	1,566	1,720
Administration expenses	34	33
Total loss (profit)	19,071	6,100

Appendix 3 Asset and benefit obligation reconciliation for the year to 31 March 2020

Reconciliation of opening & closing balances of the present value of the defined benefit obligation	Year to	Year to
	31 Mar 2020	31 Mar 2019
	£000s	£000s
Opening defined benefit obligation	150,157	147,226
Current service cost	3,914	3,296
Interest cost	3,536	3,710
Change in financial assumptions	(21,053)	6,794
Change in demographic assumptions	(2,858)	(8,386)
Experience loss/(gain) on defined benefit obligation	2,134	-
Liabilities assumed / (extinguished) on settlements	38,849	-
Estimated benefits paid net of transfers in	(4,125)	(3,946)
Past service costs, including curtailments	167	1,051
Contributions by Scheme participants and other employers	650	586
Unfunded pension payments	(170)	(174)
Closing defined benefit obligation	171,201	150,157

Reconciliation of opening & closing balances of the fair value of Fund assets	Year to	Year to
	31 Mar 2020	31 Mar 2019
	£000s	£000s
Opening fair value of Fund assets	84,358	78,390
Interest on assets	1,970	1,990
Return on assets less interest	(12,099)	4,740
Other actuarial gains/(losses)	(527)	-
Administration expenses	(34)	(33)
Contributions by employer including unfunded	3,322	2,805
Contributions by Scheme participants and other employers	650	586
Estimated benefits paid plus unfunded net of transfers in	(4,295)	(4,120)
Settlement prices received / (paid)	25,459	-
Closing Fair value of Fund assets	98,804	84,358

The total return on the fund assets for the year to 31 March 2020 is (£10,129,000).

Appendix 4 Sensitivity analysis

Sensitivity analysis	£000s	£000s	£000s
Adjustment to discount rate	+0.1%	0.0%	-0.1%

Projected service cost	4,298	4,408	4,521
Adjustment to long term salary increase	+0.1%	0.0%	-0.1%
Present value of total obligation	171,495	171,201	170,908
Projected service cost	4,410	4,408	4,406
Adjustment to pension increases and deferred revaluation	+0.1%	0.0%	-0.1%
Present value of total obligation	174,332	171,201	168,131
Projected service cost	4,519	4,408	4,299
Adjustment to life expectancy assumptions	+1 Year	None	- 1 Year
Present value of total obligation	177,987	171,201	164,690
Projected service cost	4,543	4,408	4,277

Appendix 5 Remeasurements in other comprehensive income

Remeasurement of the net assets / (defined liability)	Year to	Year to
	31 Mar 2020	31 Mar 2019
	£000s	£000s
Return on Fund assets in excess of interest	(12,099)	4,740
Other actuarial gains/(losses) on assets	(527)	-
Change in financial assumptions	21,053	(6,794)
Change in demographic assumptions	2,858	8,386
Experience gain/(loss) on defined benefit obligation	(2,134)	-
Changes in effect of asset ceiling	-	-
Remeasurement of the net assets / (defined liability)	9,151	6,332

Appendix 6 Projected pension expense for the year to 31 March 2021

Projections for the year to 31 March 2021	Year to 31 Mar 2021 £000s
Service cost	4,408
Net interest on the defined liability (asset)	1,674
Administration expenses	40
Total loss (profit)	6,122
Employer contributions	2,235

Note that these figures exclude the capitalised cost of any early retirements or augmentations which may occur after 31 March 2020. These projections are based on the assumptions as at 31 March 2020, as described in the main body of this report.
